Vertical Multi-Stage Pumps

T&T Pump Company has been manufacturing pumps since 1964. That is over 45 years of experience in our field of expertise...multi-stage centrifugal pumps.

At T&T, the manufacturing process begins with design, manufacturing and built-in quality and follows through to the stringent testing standards we demand of each pump that leaves our facility.

T&T pumps have proven themselves in application after application...from 3 miles underground in the harsh conditions of the mining industry to the ultra-clean environment of the semiconductor industry.

We build pumps to last...not to generate a source of parts revenue!

Demanding High-Pressure Applications? T&T Multi-Stage Vertical Pumps

- TEFC or ODP motor with rugged direct coupling...allows integration into more systems
- Multiple seal options for increased versatility of fluid temperatures & pH
- Easy access to coupling via snap-in guards...reduces maintenance
- Zinc-plated hardware for corrosion resistance & rust reduction
- Teflon neck-rings ...reduces recirculation and improves pumping efficiency
- Flanged or NPT connection options...easy system integration to a wide range of installation types...easy retrofits
- 304 or 316 High-Quality stainless steel for long-life & increased water quality compatibility
- Extra durable self-adjusting shaft seal...NO MAINTENANCE REQUIRED!

- TTVs have a small footprint with parallel connections that allows for easy in-line installation... saves space... simplifies piping
- TTVs allow for more efficient production of pressure and volume compared to single-stage centrifugals (can be as much as 2.5X more efficient), reducing HP requirements accordingly...saves operational costs and initial motor & controls cost

TTVs produce pressure with multiple stages that are smaller diameter than single-stage pumps trying to produce the same pressure & flow, so, noise and vibration are reduced...yielding lower dB levels and less wear & tear on internal components

REBUILD KITS:

- Pre-assembled shaft/impeller stacks
- Ready for drop-in
- Saves time & money by avoiding complete pump replacement

NEW OR RETROFITS:

- Pressure Boosting
- Boiler Feed
- Cooling Towers
- Water Distribution
- Water Supply
- Water Treatment
- OEM Applications
- Where space & High-Pressure performance is critical

MODELS	HP RANGE	INLET OUTLET	GPM
TTV2	1/2-5	1-1/4	1.2-20
TTV4	1/2-5	1-1/4	3-40
TTV8	3/4-15	2	5.3-65
TTV16	5-25	2	8.5-115
